CPU results

- ► Fancy Intel test system at CERN. Xeon Gold 6140. 72 cores (w/hyperthreading)
- ▶ Boxes are median and interquartile range. Whiskers show min/max over 1000 repeats
- \triangleright y axis is "ms/(APA · ms)", ie can keep up with 1 APA's data if it's less than 1
- ▶ ie 4 cores can keep up with data from one APA on average
